

Division Transit Project

Community Advisory Committee questions, and project staff responses

May 16, 2017

Station Design and Route

Is there any anticipated variation in shelter size for eastbound vs. westbound?

Design of platform amenities is a later phase of the design process.

Boarding

If a rider is paying cash, do they interact with the driver? How would that affect boarding times?

The current assumption is that cash paying riders would interact with the operator, but most people would use new the Hop cards. The utilization of the Hop card and multi-door boarding would minimize the congestion at the door for cash-only users.

Budget

How much of the budget is for station design, vehicles and other things?

The project's total budget is not to exceed \$175 million. The distribution among various project items continues to be a variable until we get to complete final design, anticipated in 2018. Cost estimates are attached and will be updated as the design progresses. TriMet will be sharing a more detailed breakdown of the budget at our 5/18 CAC meeting.
